

GMW CONE DRYER

This system exploits the lightly forced passage of hot air through carefully avoiding strong pressure on its fibers, eliminates migration problems. It achieves uniformity in the final residual moisture and perfectly conditioned yarn.

These are dryers suitable for drying yarn packages that are transferred onto special trolley the machine is provided with. The special construction of the trolleys and spindles allows the loading of packages of different sizes and heights as well as partial loading of the trolleys.

The drying cycle is fully automatic and controlled via preset table electronic equipment that allows adjustments for each kind of yarn.

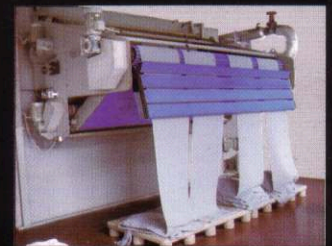

Model No.	Capacity (Kg)	No. Of Carriers	HP
GMW-15	150	1	20
GMW-30	300	2	15 EACH

RELAX DRYER

Silent Features

1. Possible for both dyeing and heat treatment.
2. Three layers of fabric can run side by side.
3. Glass wood insulation to ensure best efficiency.
4. Pneumatic drive for each belt and two point edge control.
5. Doors mechanism is very quick for easy operation.
6. Tensionless conveyor system offers lowest residual shrinkage.
7. It is suitable for tubeler, open width woven fabrics weather natural or synthetic based.
8. Individual AC Inverter with each blower motors along with programmer system.
9. Automatic temperature control system for each chamber.
10. The fabric is treated under the relax form on the conveyor belts with tumbling movements for achieving the dimensional stability by means of over feed to obtain length shrinkage better handle and bulking of the fabric.
